

Reverberance Control Panel 50 mm

CATS-REV-CP-50

Reverberance Control Panel 50 mm

REVERBERANCE 50 MM CONTROL PANEL

The Complete Acoustic Treatment Systems Reverberation Control Panel 50 is an acoustic treatment unit which reduces room reverberations. It includes a self adhesive backing layer and is just 50 mm deep.

The CATS Reverberation Control Panel 50 is a porous absorber designed for wall mounting and which reduce the effect of reverberation for clearer, more precise audio at upper bass, mid and high frequencies.

The rear face of the Reverberation Control Panel 50 is **covered with a self adhesive layer enabling simple peel and stick installation**. In dusty environments an additional mounting screw can be used to anchor the panel.

The Reverberation Control Panel is a dense open cell foam with a total depth of just 50 mm.

Dimensions Per Panel	300 x 300 x 50 mm (WHD)
Weight Per Panel	350g
Box Quantity	16x panels
Acoustic Data	Please see www.c-ats.co.uk/technical-information

Complete Acoustic Treatment System has been designed to specifically address the "Three Rs of Acoustics":

- Resonance
- Reverberation
- Reflection

Each component in the system is targeted at one of these three acoustical problems resulting in a comprehensive and repeatable solution that remains easy to install and integrate in to the room. All of this is achieved within a depth of just 50mm.
